|--------------------------|--|
| <b>Topic:</b>            | To write a program to implement CPU scheduling algorithm FCFS  |
| <b>Prerequisite:</b>     | Basic knowledge of using the linux terminal and system calls, and C language   |
| <b>Mapping With COs:</b> | CSL404.4   |
| <b>Theory:</b>           | <p>Given n processes with their burst times, the task is to find average waiting time and average turn around time using FCFS scheduling algorithm. (FCFS), is the simplest scheduling algorithm. In this, the process that comes first will be executed first and next process starts only after the previous gets fully executed. Here we are considering that arrival time for all processes is 0.</p>                      |
| <b>Objective:</b>        | <ul style="list-style-type: none"><li>• To understand &amp; analyse FCFS algorithm</li><li>• To implement FCFS algorithm</li><li>• To calculate average waiting time &amp; turn aroundtime</li></ul>   |
| <b>Program Code:</b>     | <pre>#include &lt;stdio.h&gt;  // Function to find the waiting time for all processes int waitingtime(int proc[], int n, int burst_time[], int wait_time[]) {     // waiting time for first process is 0     wait_time[0] = 0;     // calculating waiting time     for (int i = 1; i &lt; n ; i++ )         wait_time[i] = burst_time[i-1] + wait_time[i-1] ;     return 0; }  // Function to calculate turn around time</pre> |

```

int turnaroundtime( int proc[], int n,
int burst_time[], int wait_time[], int tat[]) {
    // calculating turnaround time by adding
    // burst_time[i] + wait_time[i]

    int i;
    for ( i = 0; i < n ; i++)
        tat[i] = burst_time[i] + wait_time[i];
    return 0;
}

//Function to calculate average time
int avgttime( int proc[], int n, int burst_time[]) {
    int wait_time[n], tat[n], total_wt = 0, total_tat = 0;
    int i;

    //Function to find waiting time of all processes
    waitingtime(proc, n, burst_time, wait_time);

    //Function to find turn around time for all processes
    turnaroundtime(proc, n, burst_time, wait_time, tat);

    //Display processes along with all details
    printf("Processes  Burst   Waiting Turn around\n");

    // Calculate total waiting time and total turn
    // around time
    for ( i=0; i<n; i++) {
        total_wt = total_wt + wait_time[i];
        total_tat = total_tat + tat[i];

        printf(" %d\t %d\t\t %d \t%d\n", i+1, burst_time[i],
wait_time[i], tat[i]);
    }

    printf("Average waiting time = %f\n", (float)total_wt / (float)n);
    printf("Average turn around time = %f\n", (float)total_tat /
(float)n);

    return 0;
}

```

|                         |  |
|-------------------------|--|
|                         | <pre> }  // main function  int main() {      //process id's      int proc[] = { 1, 2, 3, 4, 5};      int n = sizeof proc / sizeof proc[0];      //Burst time of all processes      int burst_time[] = {5, 8, 12, 15, 20};      avgtime(proc, n, burst_time);      return 0;  } </pre>  |
| <b>Output Snapshot:</b> | <pre> dbit@complab4-22:~\$ gcc fcfs.c dbit@complab4-22:~\$ ./a.out Processes  Burst   Waiting Turn around 1          5         0         5 2          8         5        13 3         12        13        25 4         15        25        40 5         20        40        60 Average waiting time = 16.600000 Average turn around time = 28.600000 dbit@complab4-22:~\$ █ </pre> |
| <b>Outcome:</b>         | <ul style="list-style-type: none"> <li>Ability to <b>implement and analyze</b> different process scheduling algorithms</li> </ul>  |
| <b>Conclusion:</b>      | Students will learn to analyse and implement FCFS algorithm  |
